Ques : Create a class "phone" with init method and print company,model, price of object

Source code:

```
class Phone:
    def __init__(self,company,model,price):
        self.c=company
        self.m=model
        self.p=price
p1=Phone("samsung","S20 Ultra",98000)
p2=Phone("Apple","11 Pro max",104000)

print(p1.__dict__)
print(p1.m)

print(p2.__dict__)
print(p2.p)
```

Output:

```
{'c': 'samsung', 'm': 'S20 Ultra', 'p': 98000}
S20 Ultra
{'c': 'Apple', 'm': '11 Pro max', 'p': 104000}
104000
```
